Professional Summary

Ph.D. candidate in Artificial Intelligence with 4+ years of prior applied experience across Machine Learning Engineering, Computer Vision, and Data Science roles. Combines deep theoretical expertise in Reinforcement Learning with hands-on delivery of Generative AI systems – RAG pipelines, autonomous agents, and LLM fine-tuning (QLoRA) – through to production: containerization, cloud deployment, CI/CD, and observability. Proficient in Python, PyTorch, LangChain, and C++, with a rigorous mathematical foundation and a track record of shipping ML systems end-to-end, not just prototypes.

Technical Skills

- **Core Languages:** Python, C++, R, SQL
- **Generative AI & LLM Engineering:**
 - **Architectures & Techniques:** RAG (Retrieval-Augmented Generation), Agents & Tool Use, QLoRA Fine-tuning, Prompt Engineering, Vector Embeddings & Semantic Search.
 - **Frameworks & Tools:** LangChain, Hugging Face, Sentence-Transformers, Gradio, Frontier APIs, Open-Source Models.
 - **Application:** Multi-modal interaction (Text/Image/Audio), Function Calling, Model Evaluation.
- **AI/ML Expertise:**
 - **Computer Vision:** Object Detection, Segmentation (Yolact++, SoloV2, UNet), Image Registration, Image Stitching & Feature Matching (ORB)
 - **Deep Learning:** Model Architecture Analysis, Regularization, GANs, VAEs, Diffusion Models
 - **Reinforcement Learning:** Policy Optimisation, Knowledge Transfer, Human-Agent Interaction
 - Practical experience with High Performance Computing
- **MLOps, Deployment & Cloud:**
 - **Cloud & Infrastructure:** Microsoft Azure (Container Apps, Container Registry), Infrastructure-as-Code (Bicep)
 - **CI/CD & Testing:** GitHub Actions, automated testing (pytest, unittest/mock)
 - **Containerization:** Docker (multi-stage builds, container orchestration)
 - **API & Backend:** FastAPI, RESTful API design, React (full-stack prototyping)
 - **Observability:** Azure Application Insights, OpenTelemetry
 - **Edge & Optimisation:** On-device Deployment (Edge AI, TensorFlow Lite), Model Quantization, Performance Benchmarking
- **Developer Tools:** Git, L^AT_EX
- **Mathematical Foundations:** Probability & Statistics, Linear Algebra, Optimization

Projects

AI-Powered Resume-to-Job Matcher

Personal Project

- Architected and deployed an end-to-end ML web application (FastAPI backend, React frontend) that parses resumes and semantically ranks live job listings using Sentence-Transformer embeddings and cosine similarity search.
- Containerized the full stack with multi-stage Docker builds and deployed to Azure Container Apps; authored Infrastructure-as-Code (Azure Bicep) covering the registry, compute, and networking layer for fully reproducible, one-command environment provisioning.
- Built and automated a CI/CD pipeline (GitHub Actions) that runs the automated test suite (pytest), builds and pushes container images, and redeploys to Azure on every commit, removing all manual deployment steps.
- Instrumented the service for production observability with Azure Application Insights and OpenTelemetry, enabling real-time monitoring of request latency, throughput, and failure rates.

Industry Experience

Machine Learning Engineer

2020 – 2022

Trenser Technology Solutions

- Led end-to-end development (PoC through production) of an Instax photo-frame digitization pipeline, partnering with an iOS engineer to ship it inside a mobile application now publicly available.
- Re-engineered the frame detection stage – identifying and cropping Instax mini/SQ/wide frames captured against arbitrary backgrounds – by hardening a classical OpenCV/Hough-Transform baseline and introducing a hybrid fallback to object detection and semantic segmentation for noisy, low-contrast cases, lifting detection accuracy by 20 points (71% → 91%) across all frame types.
- Quantized and converted trained models to TensorFlow Lite for real-time, on-device inference on mobile hardware.

- Designed a glare-removal method using multi-angle image stitching (ORB feature matching), exploiting the fact that no single frame region is glare-affected across every capture angle to reconstruct a clean, glare-free composite output.
- Analyzed, implemented, and benchmarked SOTA computer vision models (e.g., Yolact++, SoloV2, UNet) for medical image segmentation, evaluating performance and efficiency trade-offs to guide deployment decisions.

Junior Data Scientist

2019 – 2020

Lotus Interworks

- Developed a mathematical model to evaluate call centre agent performance and generated simulation data with Python.
- Contributed to an intelligent marketplace algorithm to match user queries with service providers.

Project Associate

2018 – 2019

IIT Madras

- Contributed to the ESPN Cricinfo smart stats project by modelling wicket probability and optimising constraints using Python.
- Performed data analysis, statistical inference, and visualisation for an environmental monitoring project using R.

Education

Ph.D. in Reinforcement Learning

2022 – 2026

Deakin University, Geelong, VIC

Thesis: Towards adapting Reinforcement Learning Agents.

BS-MS, Mathematics as Major and Physics as Minor

2013 – 2018

Indian Institute of Science Education and Research (IISER), Trivandrum, Kerala

Thesis: AKS primality testing and cryptography.

Awards and Scholarships

- **DUPR Scholarship**, Deakin University (2022-2025)
- **INSPIRE Fellowship**, Department of Science and Technology, India (2013-2018)

Research Publications

Conference Proceedings

Journal Submissions

- A. Shereef, T. G. Karimpanal, and S. Rana, "Dynamic Policy Fusion for User Alignment Without Re-Interaction," *Journal of Ambient Intelligence and Humanized Computing*, 2025. [Under Review]

Teaching and Engagement

Graduate Research Teaching Fellow

Deakin University

- Conducted workshops and marked assessments.

Sessional Academic

Deakin University

- Assisted the lecturer and handled Q&A sessions for course units.

Casual Research Assistant

Deakin University

- Contributed to a cyber security research project.

Maths Tutor

EzyMaths

- Private mathematics home tutoring for grade 9-12.

Technical Committee Member

HARL Workshop

- Peer reviewed papers submitted to the HARL workshop.

Reviewer

AAMAS, NeurIPS

- Reviewed papers submitted to AAMAS 2026 and NeurIPS 2026.

Conference and Symposium

- International Conference on Human Agent Interaction, 2024, Swansea, UK
- Australasian Joint Conference on Artificial Intelligence, 2025, Canberra, Australia
- DAIRNet Defence AI Symposium, Canberra, Australia

Certifications and Licenses

- Introduction to TensorFlow for Artificial Intelligence, Machine Learning, and Deep Learning (Coursera)
- Convolutional Neural Networks in TensorFlow (Coursera)
- Natural Language Processing in TensorFlow (Coursera)
- Sequences, Time Series and Prediction (Coursera)
- Data Science for Beginners using R (GITAA)
- Advanced Machine Learning using Python (GITAA)
- Valid Australian Driving License
- Employee Working With Children Check
